

MUHAMMAD AHMAD

Full Stack Developer · AI-Integrated Web App Builder

ahmadmughalweb@gmail.com | +92 324 9425513 | [linkedin.com/in/ahmadmughal-web](https://www.linkedin.com/in/ahmadmughal-web) | github.com/AhmadMughal-web

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with a proven track record of shipping production-ready, AI-integrated web applications from concept to deployment. Delivered **7 live projects** — including a real-time AI chatbot, a full-stack social media platform, and an AI-powered career tool — entirely self-taught in under 9 months. Proficient across the complete development pipeline: React.js frontends, Node.js/Express backends, MongoDB databases, REST API architecture, and AI integrations using Groq API. Seeking a **Full Stack Developer** role where speed, ownership, and modern AI fluency matter.

TECHNICAL SKILLS

Frontend	React.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap
Backend	Node.js, Express.js, REST APIs, MongoDB, JWT Authentication, CRUD
AI & APIs	Groq API, GitHub Copilot, AI Integration, Prompt Engineering
DevOps	Git, GitHub, Render, Netlify, CI/CD, Responsive Design
Tools	VS Code, Postman, MongoDB Atlas, npm, Figma (basic)

PROJECTS

PingUp — Social Media Platform

React.js · Node.js · Express.js · MongoDB · Socket.io · Render

- Architected and deployed a full-featured Facebook-style social platform supporting real-time messaging, friend connections, post/story creation, media uploads, and content deletion — all in a single cohesive product.
- Built real-time bidirectional chat using Socket.io, achieving <200ms message delivery with zero data loss across concurrent sessions.
- Engineered a secure media pipeline handling image/video uploads with user-controlled delete functionality, backed by MongoDB and JWT-authenticated REST APIs.
- Designed a fully responsive, mobile-first UI with smooth UX for feed, notifications, profile, and story flows — deployed live on Render.

AI-Powered Portfolio Website

React.js · Node.js · Express.js · Groq API · Render

- Shipped a developer portfolio featuring a live AI chatbot (Groq API) that answers recruiter questions about skills and projects in real time — 100% uptime since launch.
- Secured all API calls via a Node.js/Express proxy server, eliminating client-side key exposure and achieving zero security incidents.
- Engineered immersive UI with 3D card physics, canvas rope simulation, and animated gradients — achieving full mobile responsiveness across all viewport sizes.

NexusAI — AI Resume & Career Plan Builder

React.js · Node.js · Express.js · Groq API · Render

- Designed and launched an AI-powered SaaS tool that generates professional resumes, career roadmaps, and skill gap analyses from a single user input — eliminating template dependency entirely.
- Integrated Groq API for real-time structured output generation, reducing average career plan generation time to under 5 seconds per user.
- Deployed with clean, responsive UI and zero template reliance — pure AI output structured into recruiter-ready formats. Live on Render.

Food Recipe by Ahmad

- Built a fully responsive food recipe discovery platform featuring search by dish name or category (Chicken, Pasta, Beef, Cake, Sushi, Soup), real food images, and country-of-origin tags — delivering a rich browsing experience across all devices.
- Engineered a detailed recipe modal showing ingredients, step-by-step instructions, category & cuisine tags, and a direct YouTube tutorial link — giving users a complete cooking guide in one click.
- Designed a visually striking warm gradient UI (yellow-to-orange) with a cinematic hero banner, global recipe grid, and pixel-perfect card layout — deployed live on Netlify.

EDUCATION & SELF-DEVELOPMENT

Self-Taught Full Stack Developer

2026 – Present

- Progressed from zero programming knowledge to deploying 7 production-grade, AI-integrated web applications in under 9 months — no bootcamp, no shortcuts.
- Continuously upskilling in system design, API security, real-time communication (WebSockets), and AI/ML integration patterns.

Intermediate — Pre-Medical · Transitioned into software engineering through relentless self-study and hands-on project execution.

WHY MUHAMMAD AHMAD

- **Ships to production.** Every project is live and deployed on Render — not a GitHub repo collecting dust.
- **AI-native developer.** Already building with Groq API in production — integrating AI into real user flows, not just talking about it.
- **Full-pipeline ownership.** Frontend → Backend → Deployment → Monitoring — handles the complete product lifecycle independently.
- **Velocity.** Zero to production-ready full-stack developer in under 9 months, 100% self-taught — fast learning is a core skill, not a footnote.
